

The **bold-extra** package

A jiffy to provide access (in \LaTeX) to (some of) the fonts
in CTAN directory `fonts/cm/mf-extra/bold`

Robin Fairbairns, `rf10@cam.ac.uk`

November 2001

This package is provided under the provisions of the \LaTeX Project Public Licence,
<http://www.latex-project.org/lppl.txt>

This packages provides font shapes to support bold small caps and TT text. There is a choice of bold TT fonts, which are selected by package options `cmbtt` and `cmttb` (this reflects the confusingly similar font names). The default (based on the author's estimation of the fonts' relative merits) is `cmttb`.

To use these fonts you need their METAFONT sources available to your \TeX system (as far as I know, there are no Type 1 versions of the fonts available yet). Place them in an appropriate place under `fonts/source` in your TDS `texmf` tree; place this file somewhere like `tex/latex/misc` in your tree. See <http://www.tex.ac.uk/cgi-bin/texfaq2html?label=instpackages+wherefiles> for more details.
