

# CM Configuration

**EP 5.0 SP5 – What's new**

# CM Configuration

**Content  
Management**

## ▶ What's new

- ▶ CM Repository
- ▶ Hot Reload
- ▶ W2K Security and Mount Service
- ▶ KM Components Monitor
- ▶ Caches and Cache Monitor

**At the conclusion of this unit, you will know:**

-  **What is new in the KM configuration**
-  **CM Repository**
-  **Hot Reload**
-  **W2K Security and Mount Service**
-  **KM Component Monitor**
-  **Caches and Cache Monitor**

## Performance improvements

### New Features

-  **Dynamic Links**
-  **Simplified Cache Settings**
-  **Content Cache**
-  **Zipped Content**
-  **New Persistence Mode (DBFS)**

**View "documents"**

Description				
Prefix (must start with /)*	/documents			
Repository ID in Database*	documents			
Root Directory				
Root Directory for Versions				
Windows Landscape System				
Active	<input checked="" type="checkbox"/>			
Internal Links Default To Dynamic	<input type="checkbox"/>			
Preserve Version Histories	<input type="checkbox"/>			
Send Events	<input checked="" type="checkbox"/>			
Persistence Mode*	DB - All Data in DB			
Property Search Manager	com.sapportals.wcm.repository.manager.cm.CmPropertySearchManager			
Compress content greater than	-1			
Repository Services	<table><thead><tr><th>Name</th></tr></thead><tbody><tr><td><a href="#">properties</a></td></tr><tr><td><a href="#">subscription</a></td></tr></tbody></table> <div>Page 1/1</div>	Name	<a href="#">properties</a>	<a href="#">subscription</a>
Name				
<a href="#">properties</a>				
<a href="#">subscription</a>				
ACL Manager Cache	ca_rsrc_acl			
ACL Manager Factory	acl_jdbc_rep			
Cache	ca_cm			
Cache for small content (<32KB)	Not Set			
Connection Pool*	dbcon_wcmdb_cm			
Security Manager	AcISecurityManager			

[Edit](#) [Close](#)

# Three types of persistence modes

## DB

All content is stored  
in the database

## FSDB

Metadata is stored  
in the DB and  
content and folders  
in the file system

## DBFS

Metadata and folders are  
stored in the DB and  
content in the file system

File system/FS

Database/DB

# CM Repository Configuration

**View "documents"**

Description				
Prefix (must start with /)*	/documents			
Repository ID in Database*	documents			
Root Directory				
Root Directory for Versions				
Windows Landscape System				
Active	<input checked="" type="checkbox"/>			
Internal Links Default To Dynamic	<input type="checkbox"/> ——— Checkbox activates the dynamic link definition			
Preserve Version Histories	<input type="checkbox"/>			
Send Events	<input checked="" type="checkbox"/>			
Persistence Mode*	DB - All Data in DB ——— Three types of persistence mode			
Property Search Manager	com.sapportals.wcm.repository.manager.cm.CmPropertySearchManager			
Compress content greater than	-1 ——— -1 -> no content will be zipped Configuration is carried out in byte-size			
Repository Services	<table><thead><tr><th>Name</th></tr></thead><tbody><tr><td><a href="#">properties</a></td></tr><tr><td><a href="#">subscription</a></td></tr></tbody></table> <div>Page 1/1</div>	Name	<a href="#">properties</a>	<a href="#">subscription</a>
Name				
<a href="#">properties</a>				
<a href="#">subscription</a>				
ACL Manager Cache	ca_rsrc_acl			
ACL Manager Factory	acl_jdbc_rep			
Cache	ca_cm ——— One cache definition			
Cache for small content (<32KB)	Not Set ——— Definition of small content cache			
Connection Pool*	dbcon_wcmdb_cm			
Security Manager	AcISecurityManager			

[Edit](#) [Close](#)

**Allows admin to change the system configuration so that the changes take effect immediately**

**(no restart of portal required)**

**Changes will take effect on all cluster nodes**

**(single configuration for all nodes)**

## **Flavors of “Hot Reload” in CM:**

-  **Create a new component (e.g. a new repository manager instance)**
-  **Change a component (e.g. local root of fs-rm)**
-  **Delete a component (e.g. User Interface Setting)**

# Creating and Changing a Component

## Configuration

Versions" must also be specified. CM repository managers must use a dedicated connection pool.

### CM Repository

(Deleting configuration objects requires servlet engine restart)

Deletion requires servlet engine restart

Status message

## Purpose

- ✍ To integrate documents from a Windows file system into KM
- ✍ To have permissions that are identical to those in the Windows file system

## W2k Security Manager

- ✍ Uses ACLs from Windows file system

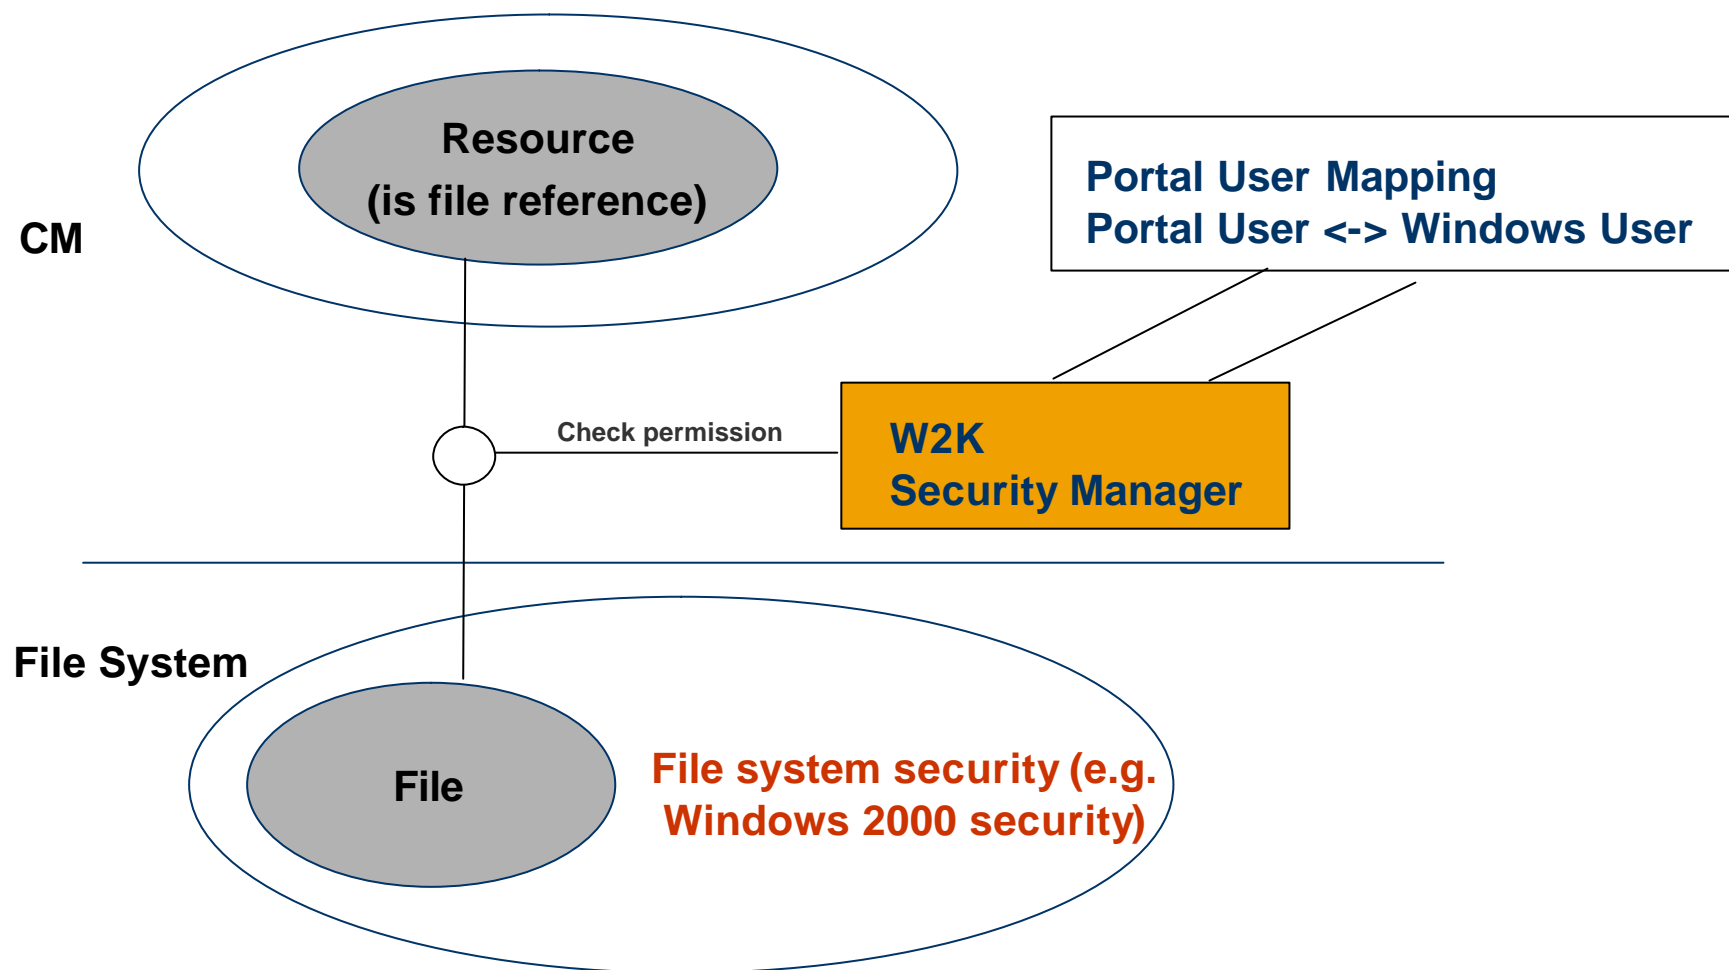

## Mount Service

- ✍ Service required to integrate documents from a remote Windows file system

## Note: Combine the W2k Security Manager and Mount Service if

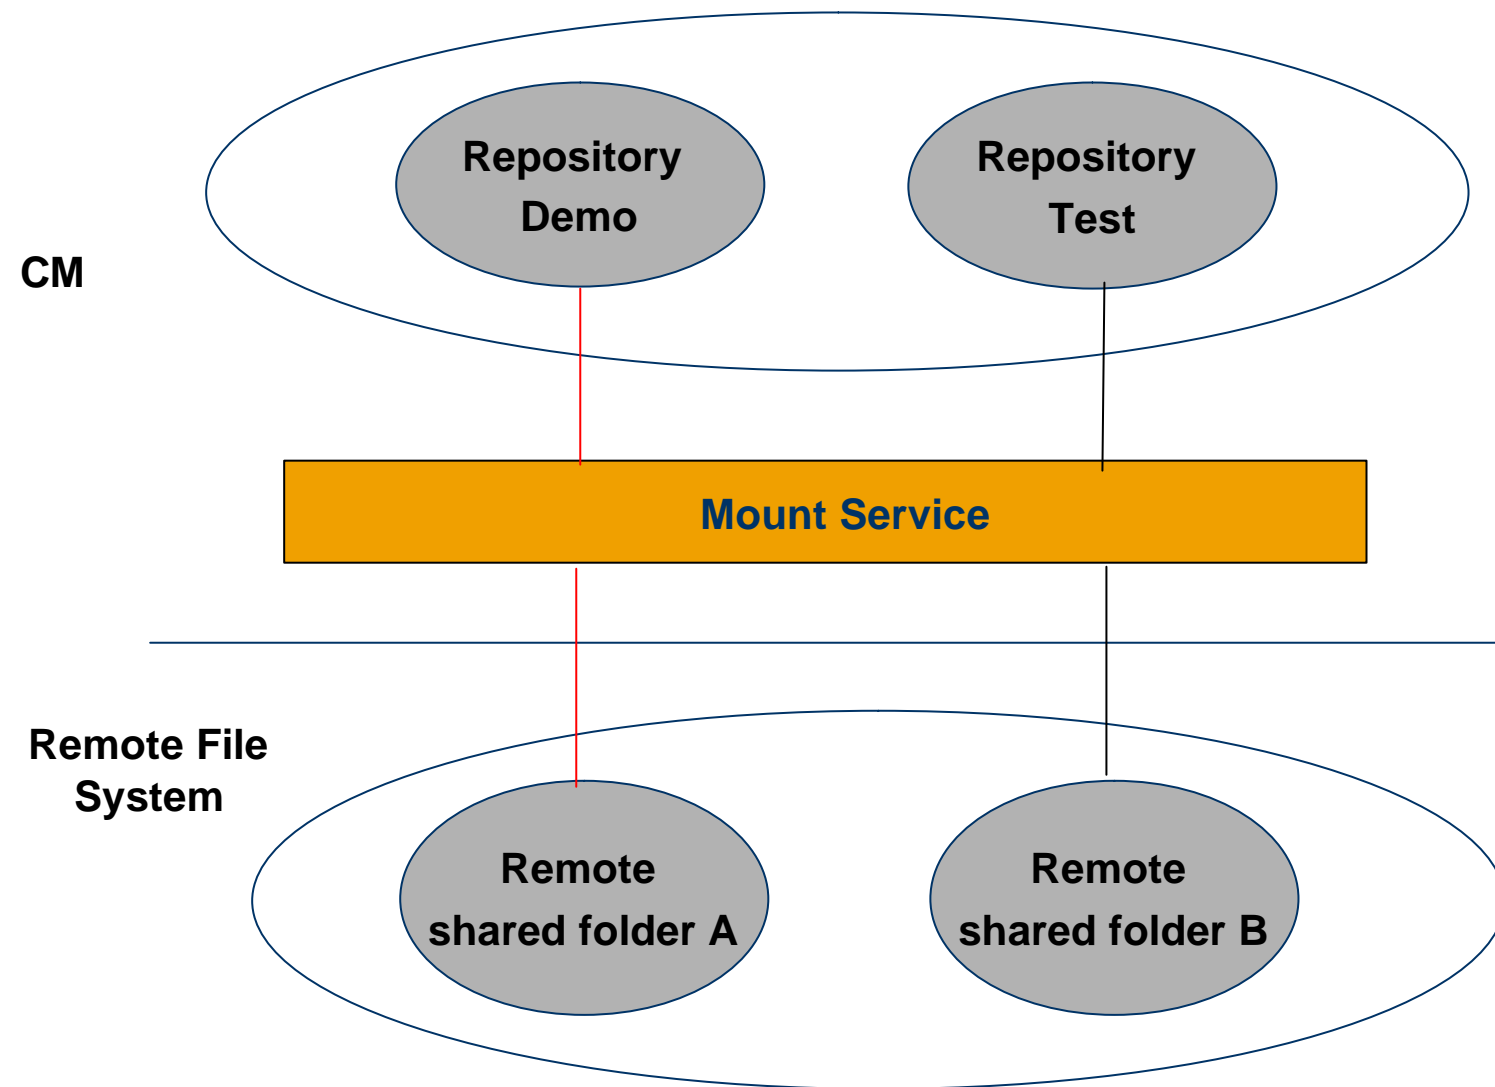

- ✍ Remote Windows file system ACLs are needed

# W2k Security Manager

- ✍ **Global service for mounting and unmounting remote folders to use them as local folders**
- ✍ **Same function as Map Network Drive in Windows 2000**
- ✍ **Possibility of accessing a remote system with different credentials**
- ✍ **Connections can be persistent**

# Mount Service

# Combining the W2k Security Manager and the Mount Service
